

Refuse the Museum

From Opposites to Unity & jump out of Frame

SPECULATIVE DESIGN | CRITICAL DESIGN

Designed an innovative museum installation which engaged visitors in active thinking: think about the relationship between people and space structure, learn to question design and break routine thinking.

Museum is a collective institution that dominate the way to impart knowledge to audience. Therefore, what the audience can know and learn is limited by the museological frame. This project aim to challenge audience's original perception that museum gives to us, and change people's perception toward the artwork in the museum.

By doing experiment and research, beframing object is a way that can reproduce people's perception and even change the context meaning of object. So this project try to use multiple methods to reframe the artwork's context in the museum and inspire people to have more perception.

In conclusion, this project try to explore and ask if the objects defined by the frame in the reality world.

Teamwork

Oct 2017- Dec 2017

BACKGROUND

What constitutes the museum is a production of a dominant ideology; an ideology that can be traced to the Enlightenment and the origination of the 'Western Knowledge Project'. Although criss-crossed by national interests and ideas it is the Enlightenment idea of knowledge (and the knowable) that forms the very nature of the museum and sets the blueprint for its plan and procedures (the wide and wild world edited and made ready for the scrutiny of a detached, objective, male gaze).

The museum ignores, refuses, brackets and sets aside what it doesn't want to know or deems unworthy of attention (knowing), and sets a procrustean rule for how something should be known (fitting the unruly world into its measures and systems of classification and order).

OBJECTIVE

What is accepted and 'excepted' (refused or ignored) in a museum; to question the criteria a museum exercises in assembling its collection-its norms, and the processes through which it normalises to make acceptable.

The way a museum 'explains' the 'worldly' thing in the descriptions of its exhibits, and, indeed, what it leaves out in its descriptions/explanations

What kind of epistemic biases are asserted in the curatorial arrangement of a museum collection (curatorial direction).

The way a museum engages its visitors in the design of the exhibition. What experiences (spatial practices) are produced and what prohibited in the spaces of the museum?

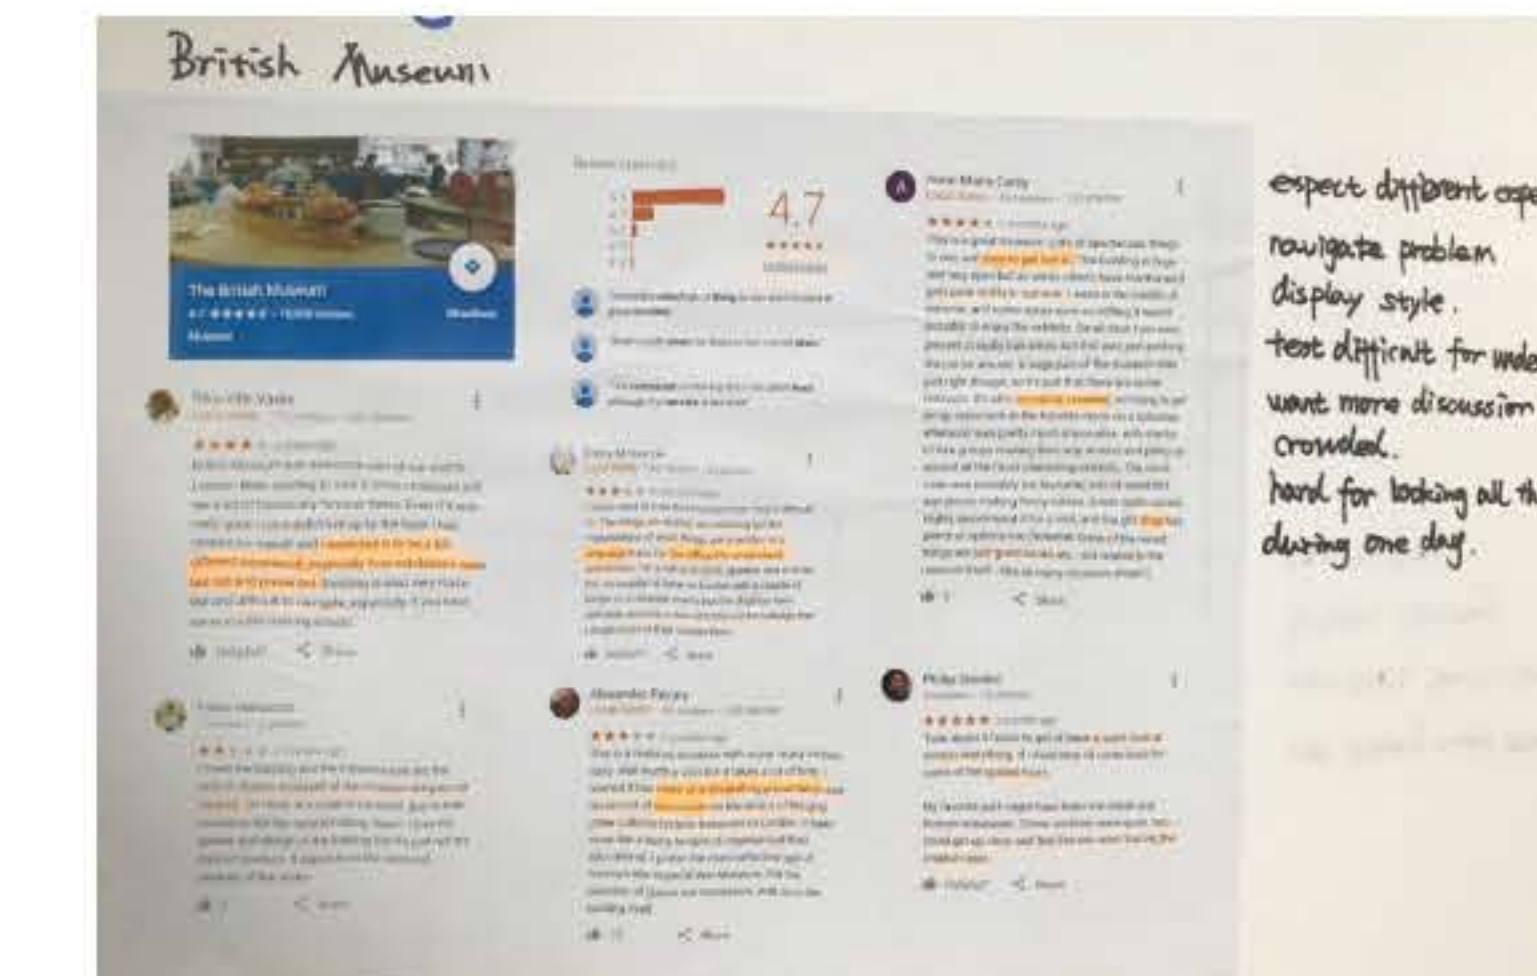

RESEARCH

Field research

The British Museum	wellcome collection	V&A Victoria and Albert Museum	Foundling Museum
Historical	Scientific	Contemporary Art	Public Welfare
Traditional exhibition frame	A Museum of modern nature Natural objects that are connected to humans	Pink Floyd: Their Mortal Remains Breakthroughs in Audiovisual Experience and Multimedia	Explore more than 275 years of London history through objects, stories, and spaces.

Objects	Still expressing and narrating to the audience according to the inertia logic that the collection can be exhibited
Physical space	Although many museums attempt to differentiate between exhibition forms, curation methods, and interactive methods, there are many attempts to establish a model for museum exhibitions

Visitors' feedback

- expect different experience.
- navigate problem
- display style.
- test difficult for understanding
- want more discussion...
- crowd
- hard for looking all the objects during one day.

- not history museum
- excellent bookshop
- helpful library
- have to queue

- a lot of interaction (maybe too much?)
- children annoying
- has helpers to answer question
- quite dull

ANALYSIS/ CONCLUSION

Limitation of Museum

Museum define the value of objects

Research

How mesuem control the value of objects?

Description	Environment
-------------	-------------

Experienment

1. What affects value?

2. How to define objects’ value

Function	History	Reflection
----------	---------	------------

3.Institution

Solution

Compare the object in the musem and the ordinary object.

End

Expand the understanding of object

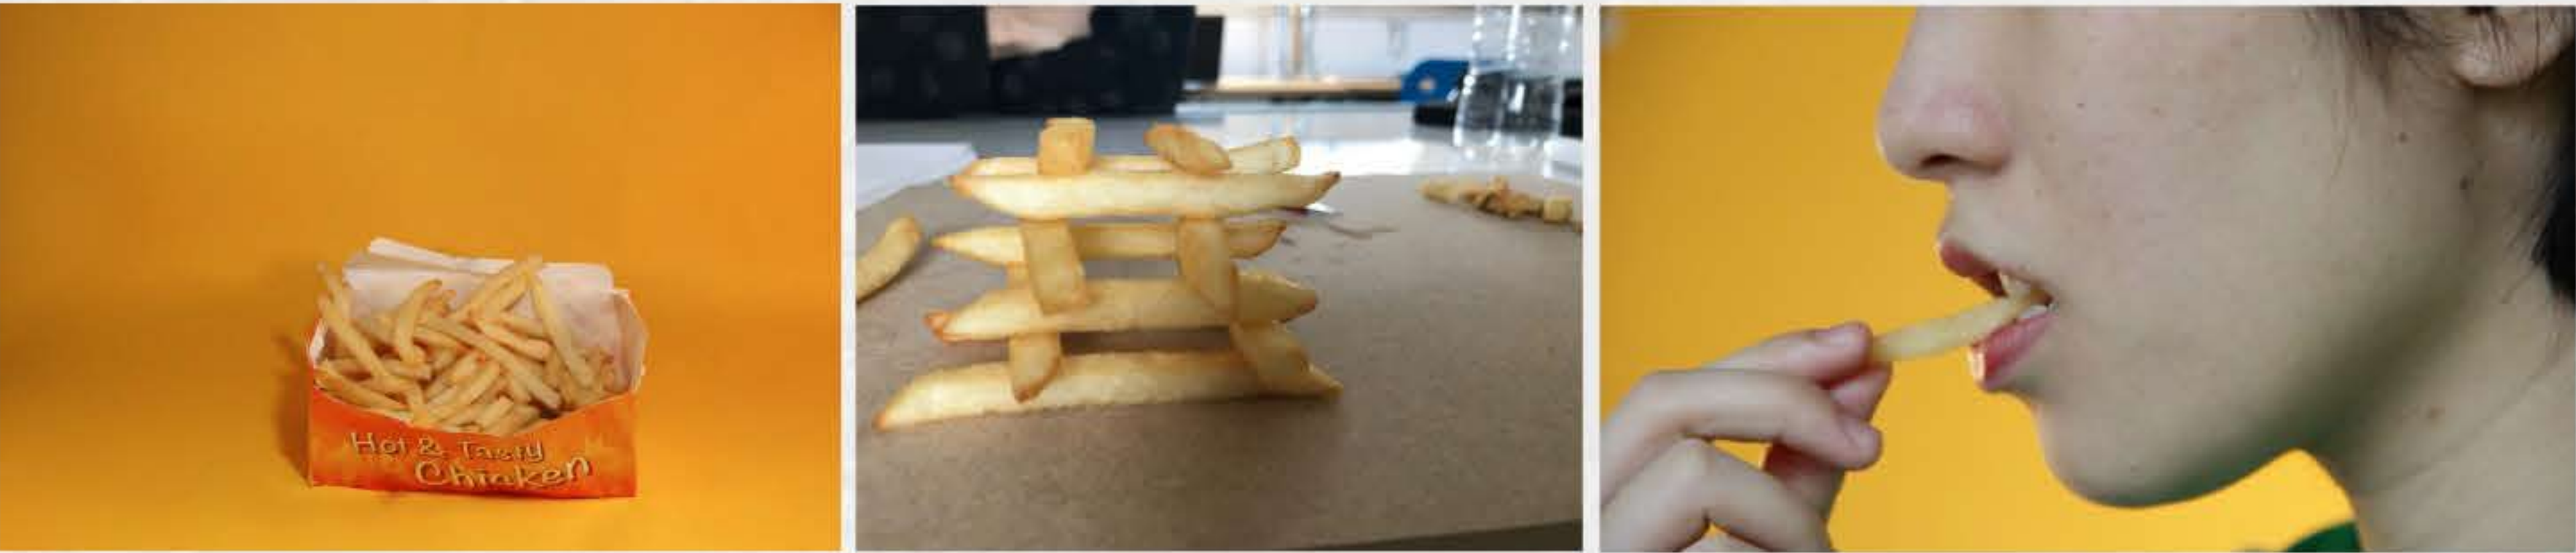

INSPIRATION

From how objects are defined as exhibits, I made a small prototype, to provocations, interventions or disruptions that test how it may be differently.

Original

Fast food When it is in chips box, it is a £2 fast food.

Exhibits Museum’s style: label(some narration), frame, white space. etc.

New Cross Chips
2017.10.24 12:00-12:01

Makes people happy
New coss is a district of London’s southeast, which in the london borough of lewisham. It is located 4.5 miles (7.25km) south-east of Charing Cross, covered by the SE14 postcode district.

CONCEPT DESIGN

From opposites to unity

1 Firstly, from the reflection of "significant" Compares the most expensive contemporary bronze sculpture and ordinary copperwire in the equal position.

Bronze sculpture: Man Pointing

Texture: Bronze
Price: Over \$141 million, became the most valuable sculpture in 12 May 2015.
Impression: Artwork, expensive, handmade article, Existentialism in Modern Art
Cast in bronze and standing whippet-thin at five feet ten inches.
Manufacture: Bronze with patina and hand-painted by the artist.
Function: Auction Collection Reflection

London, UK. 8 May 2017. A staff member view "Man Pointing", 1947. Preview of the UK's first major retrospective of Alberto Giacometti for 20 years at Tate Modern. The exhibition runs 10 May to 10 September 2017.

SIGNIFICANCE

For art: Giacometti's figurative sculpture came to be a hugely influential model of how the human figure might return to art. These bronze figures, which appear punctured and fragile, compressed in space, are in many respects visual manifestations of Existentialist thought, emblems of the condition of modern humanity ravaged by doubt.

For daily life: Decoration, display

For society: Finding a language through which to represent the figure in real space - impressed the many writers of the period who were interested in Phenomenology and Existentialism. Giacometti's figures represented human beings alone in the world, turned in on themselves and failing to communicate with their fellows, despite their overwhelming desire to reach out.

Giacometti was one of the most important sculptors of the 20th century. His work was particularly influenced by artistic styles such as Cubism and Surrealism.

Copper wire

Texture: Bronze
Price: £1.75/lb
Impression: Hardware and electrical equipment, cheap, (volume production)
Manufacture: drawing process, coated with polyethylene insulation. twisted into wire pairs.
Function: Appliance conductors, Communications wiring, electrical wiring, Automotive conductors

SIGNIFICANCE

For art: Material (for the part of artwvork)

For daily life: Broadband connections rely on copper wires. Times, Sunday Times (2008)

Most homes here still rely on the copper wires of the old telephone network to deliver broadband. Times, Sunday Times (2007)

For society: In 1877 copper took over the telephone wire market.

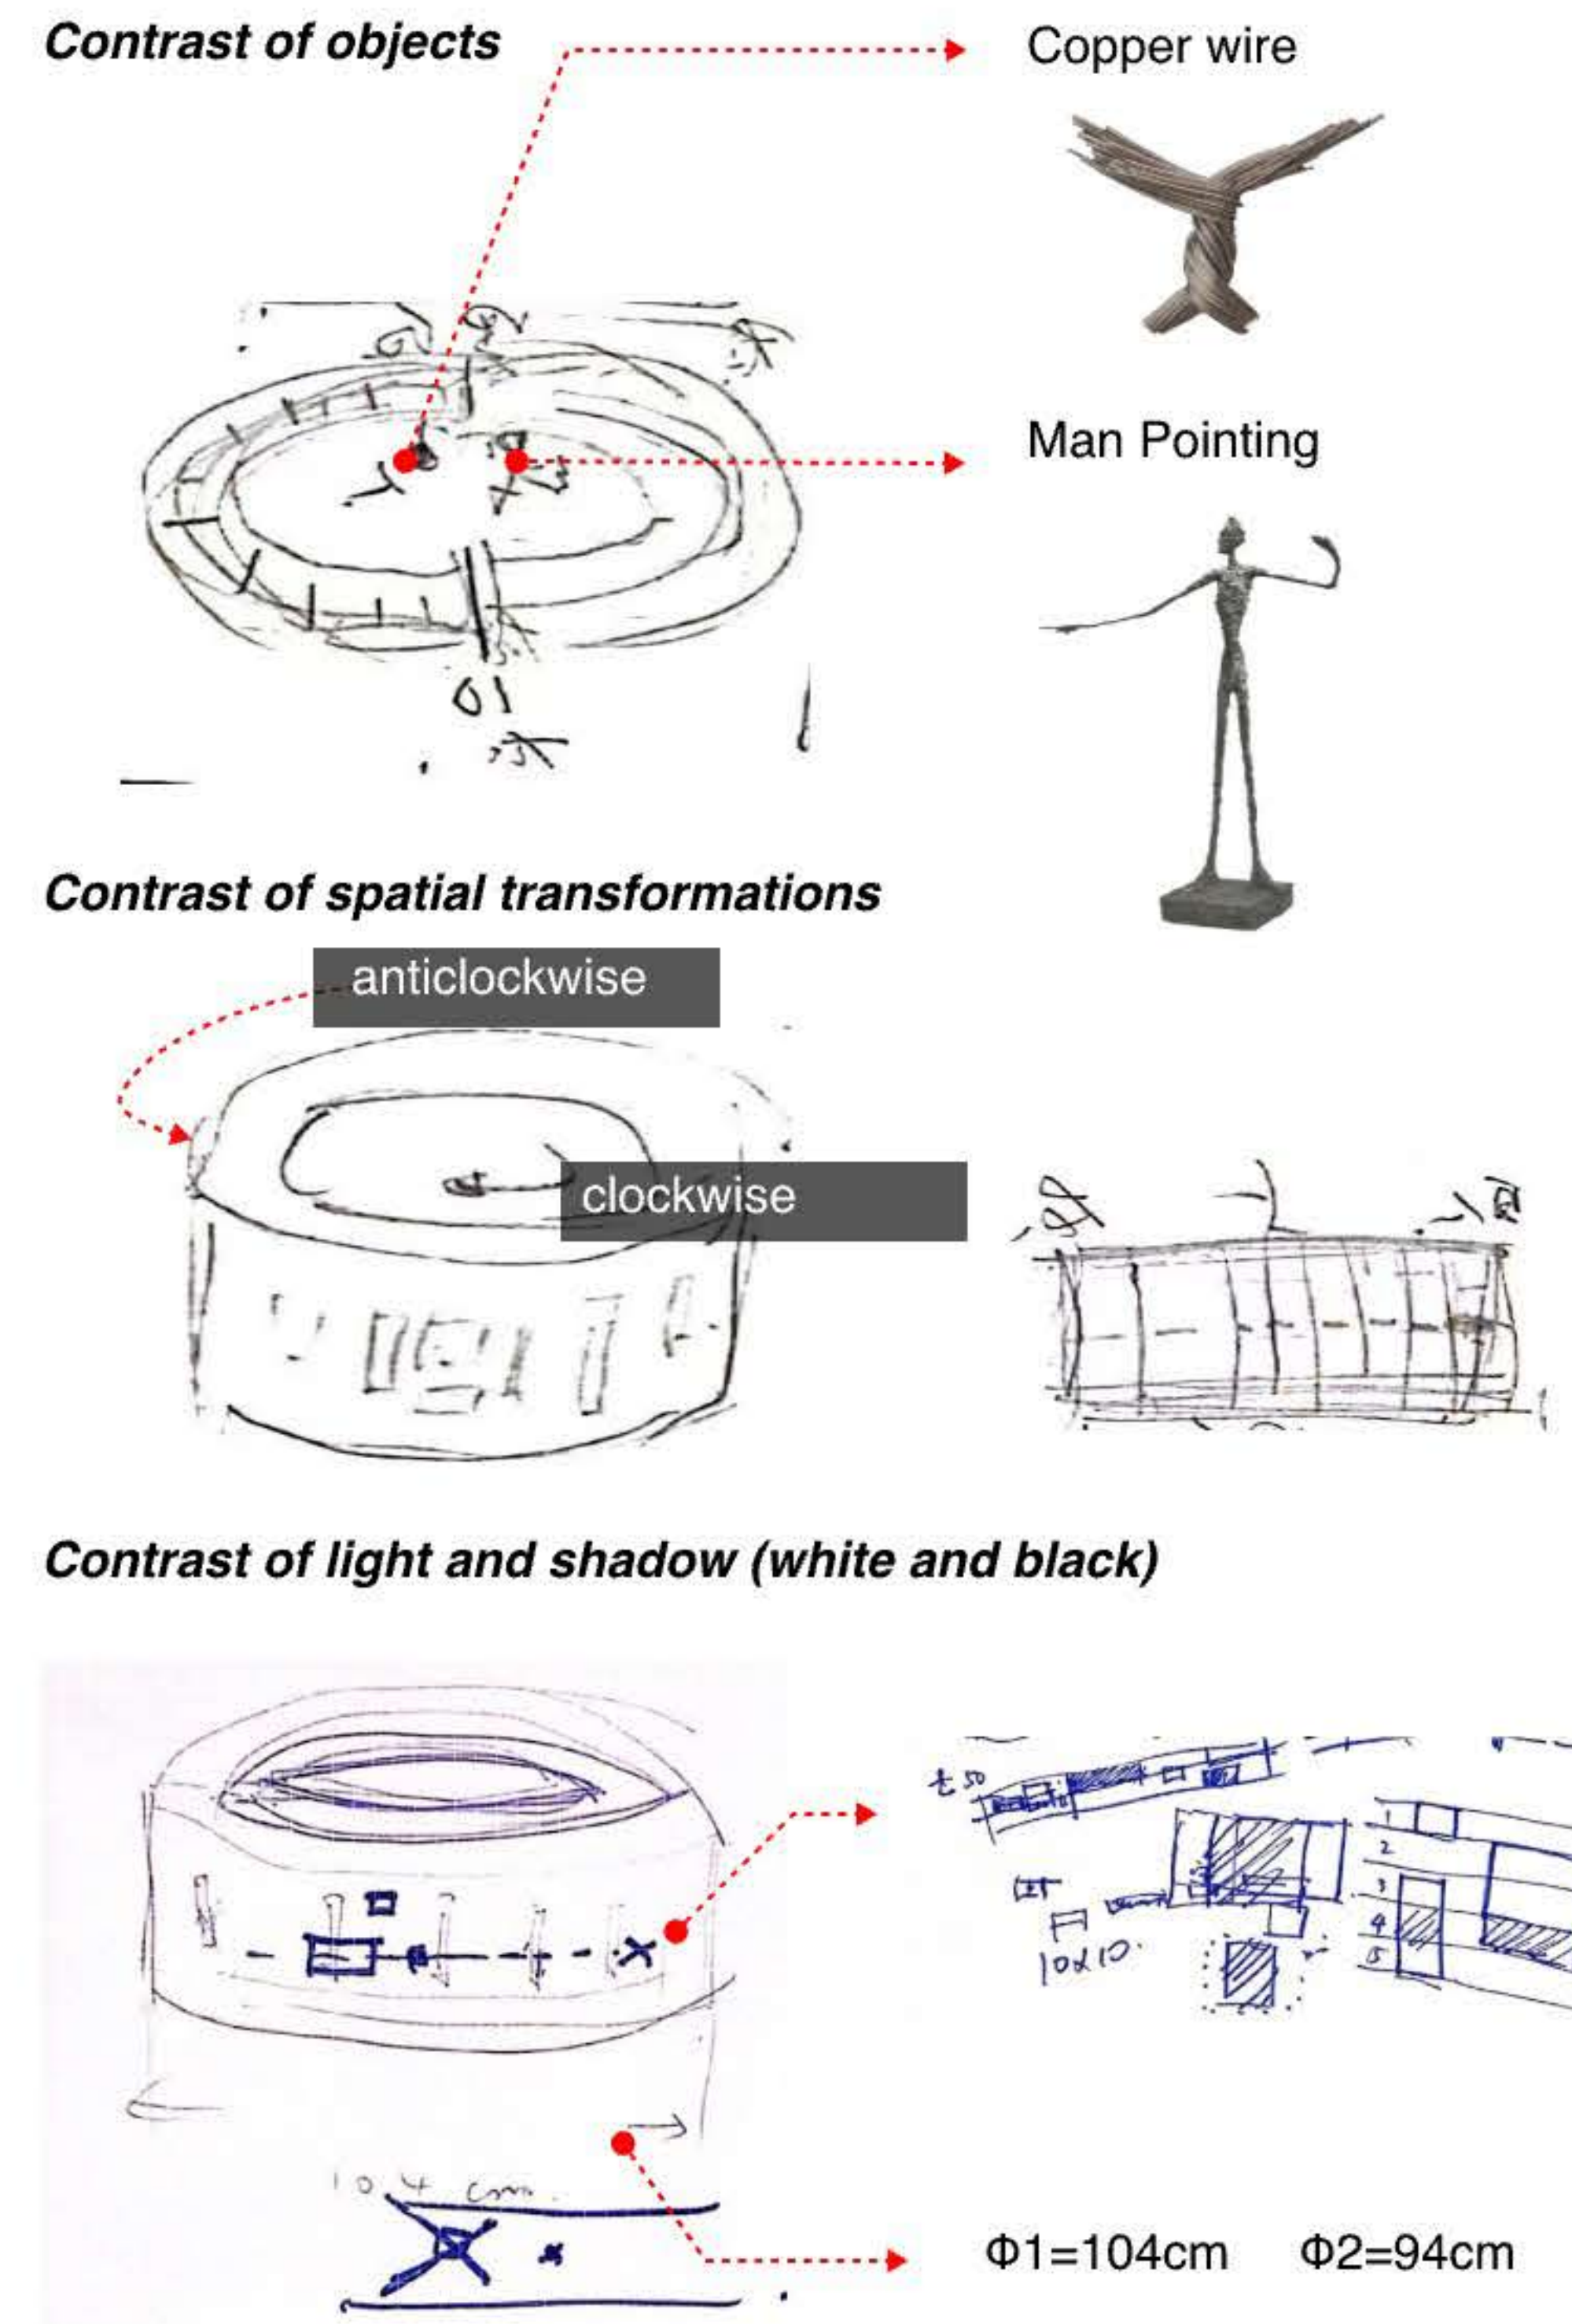

In 1884 an experimental long distance telephone line made of copper was set up between Boston and NewYork.

In 1885 a hard drawn copper telephone line was set up between New York and Philadelphia. The use of hard drawn copper wire then expanded into electrical transmission lines and throughout the eleetrical industry.

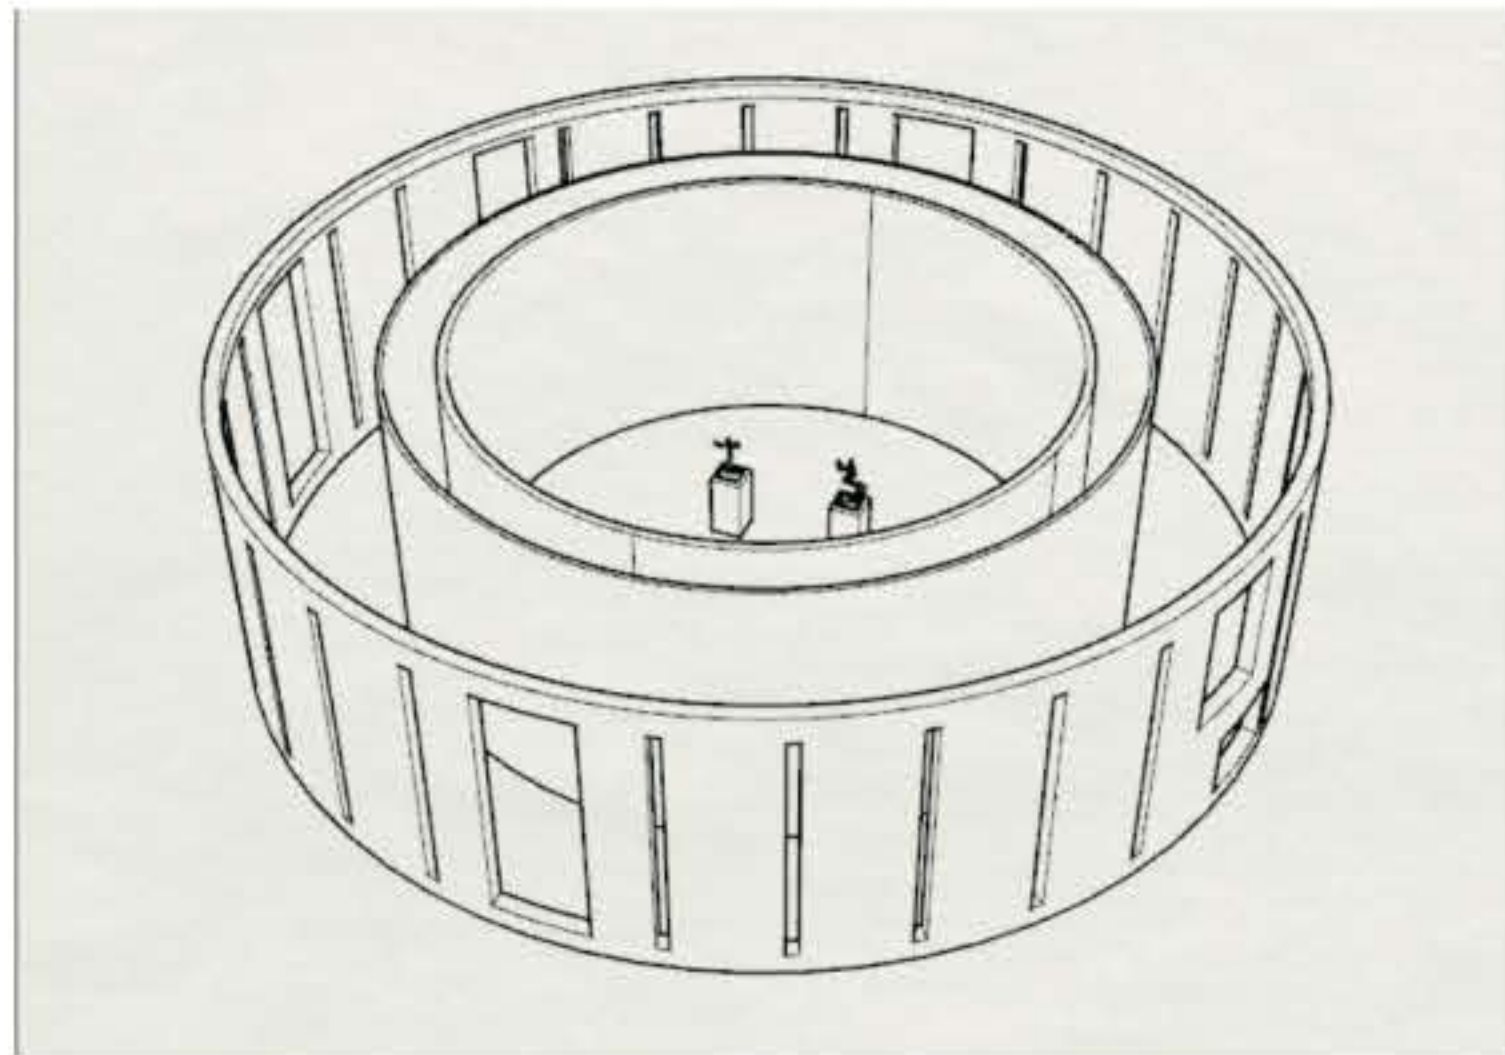

CONCEPT DESIGN

Jump out of Frame

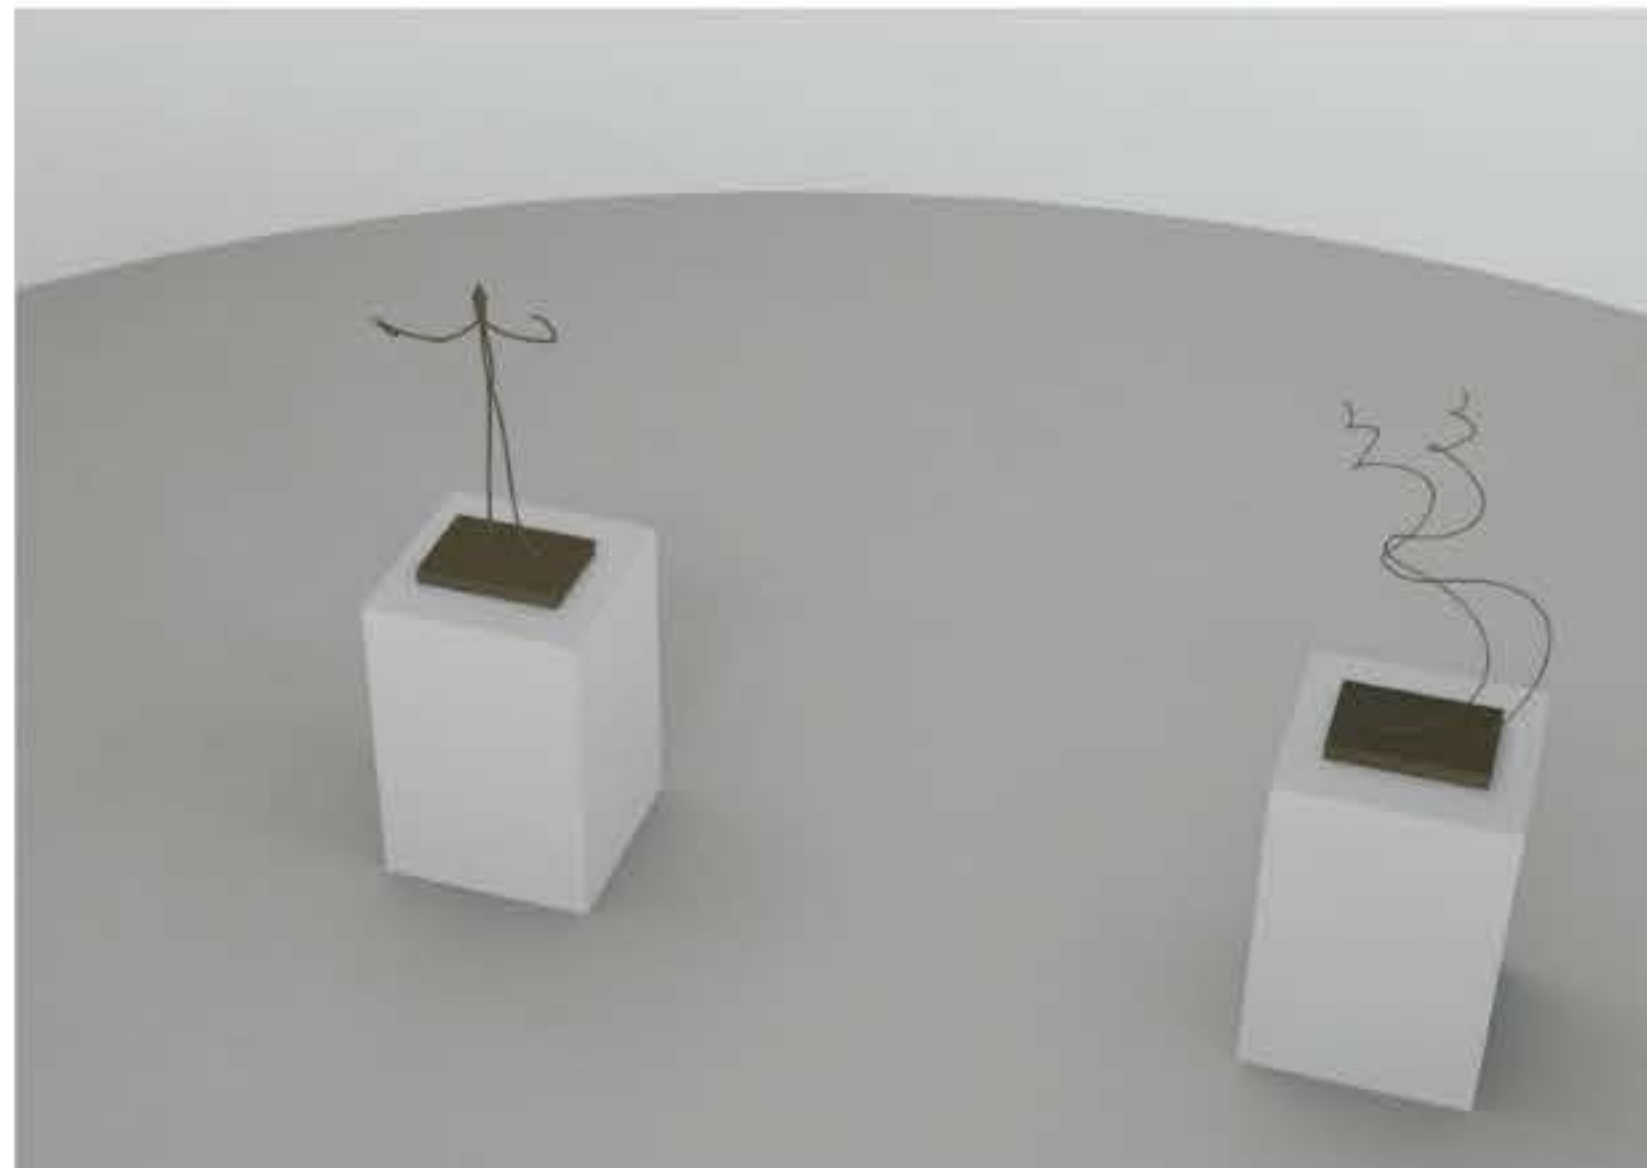

2 To refuse the information presentation in museum, this work uses a composite installation to provide a different experience: cracks and holes in the external wall fragmentary display the images and words from a revolving curtain, giving visitors an original feeling. Then the complete information is presented in a corresponding way in the inner circular wall, increasing common points and meanings make the two from the opposite black and white to a harmonious intertwined grey.

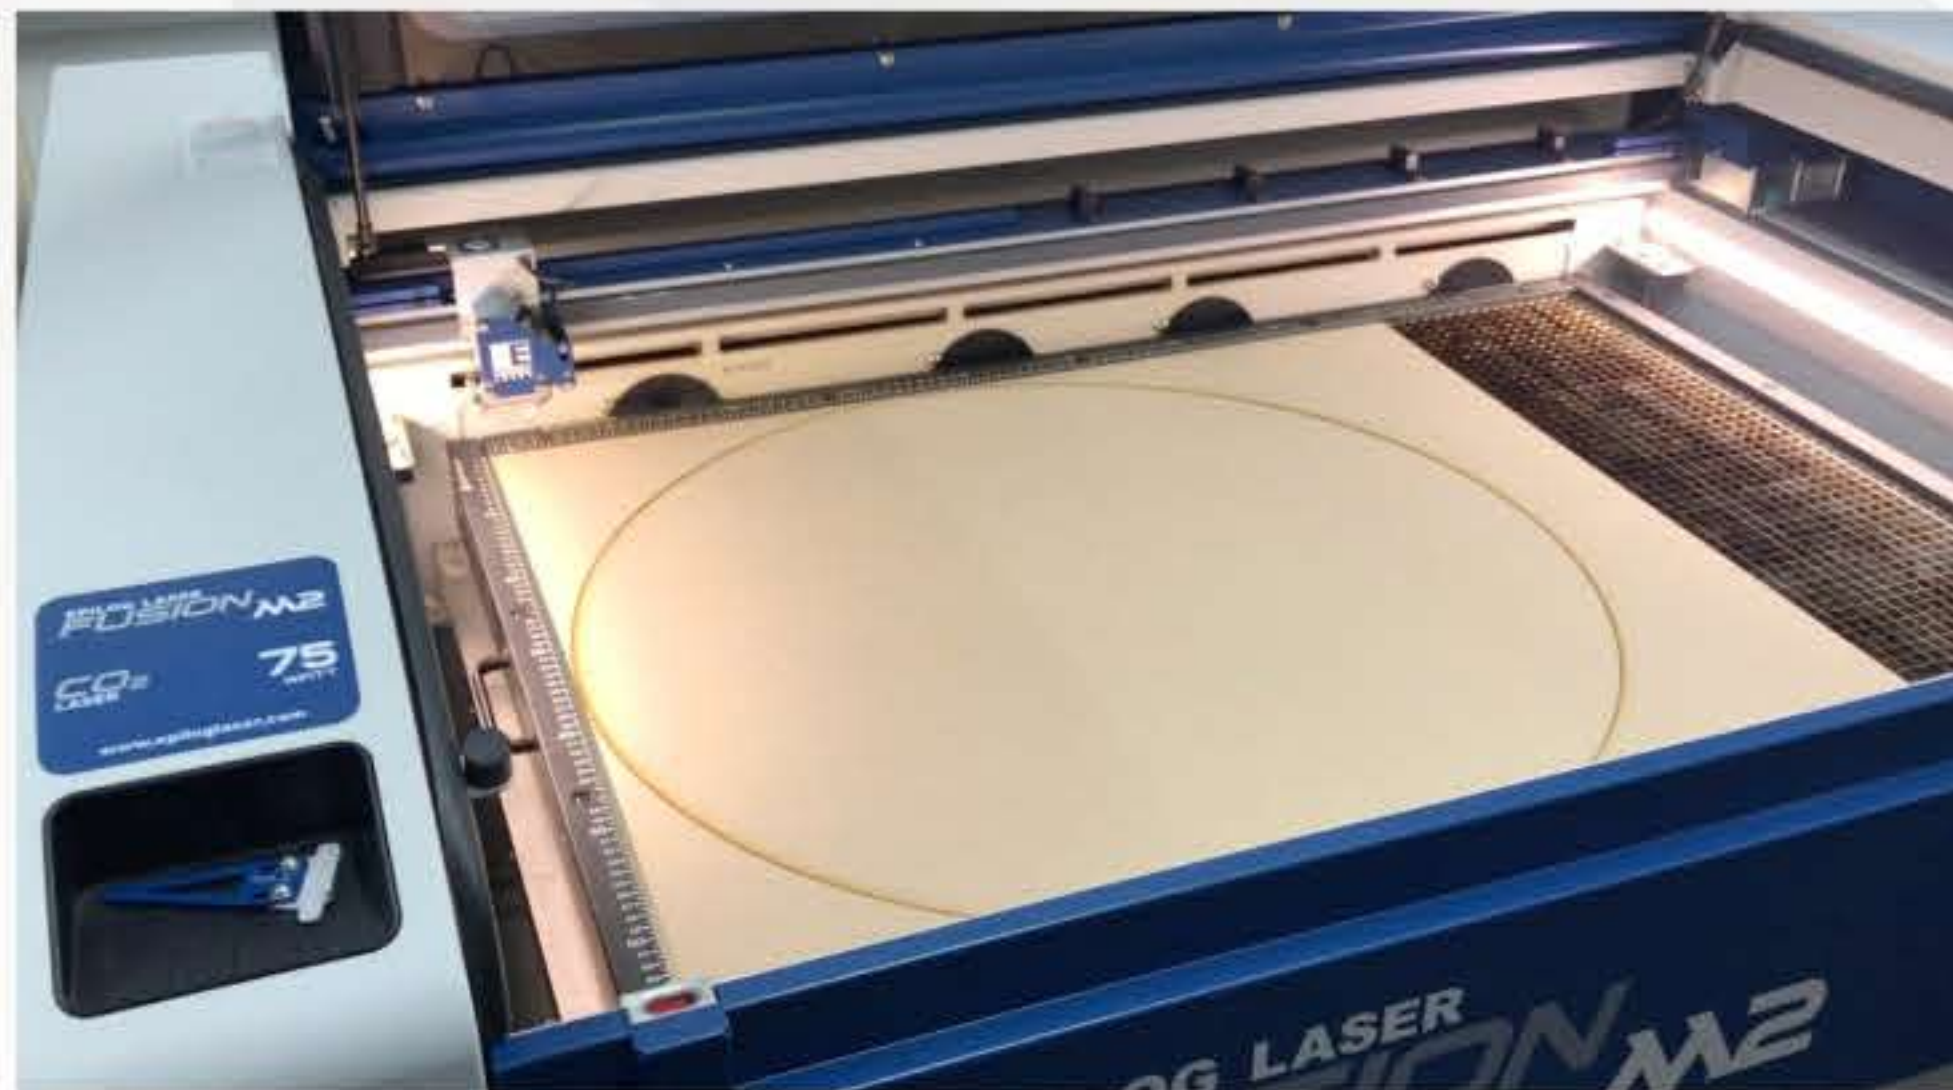

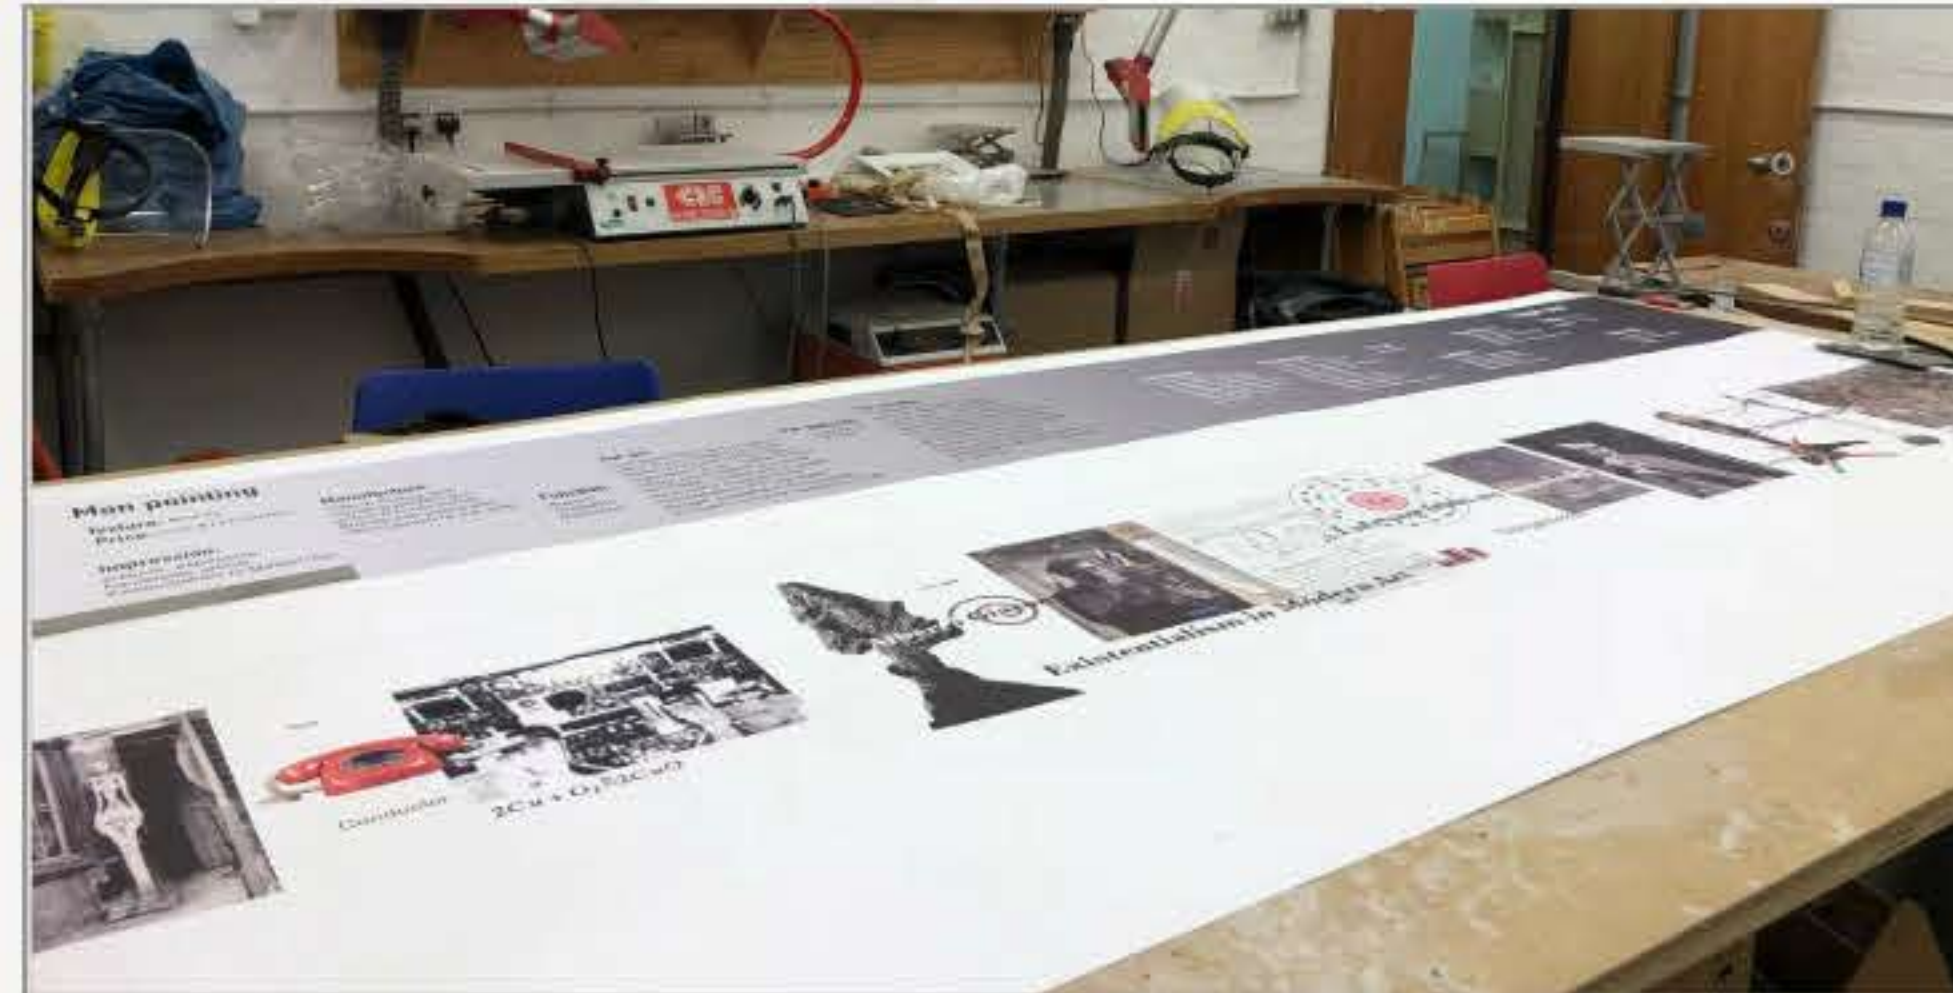

Mini Modeling

PROTOTYPE

Model with scale 1:30

Guide visitors to interpret this museum from 3 perspectives

01 Enter the inner side of the cylindrical museum to view the exhibits.

02 Lower your head inside to see yourself and the exhibits through mirror reflection.

03 Once you step out of the device, you can see the whole picture: the device and the exhibits inside rotatetogether.
