

User Experience Optimization of WMS Execution

A warehouse worker (XiaJie) input 2000 rolls raw materials (non-woven fabric) by Blacklake 3.0 WMS with optimized user experience saved 2 hours.

01 Background

Roadmap of 930 Campaign

- Priority of iteration
- P0: User experience optimization (focusing on addressing system operational efficiency issues)
- P1: Customized development support (with the ability to solve 10% of customized needs)
- P2: Industry Characteristics and Business Loop Function Iteration
- P3: Daas and Open Platforms

- Targets of User Experience Design Group:
- 【Time Saving】 Shorten the operation path, support batch operations.
 - 【System Slimming】 Simplify the redundant functions of the system.
 - 【Learning Efficiency】 Unified interaction standards to reduce learning costs.
 - 【User Value】 Increase key interactive pages (data panel) that customers can perceive.

At the beginning of the new fiscal year 2023, intelligent manufacturing (IM) business line has formulated a 930 campaign, the general manager of IM business line set up 5 Special Groups.
The User Experience Design Special Group, as a P0 level, has been established separately.
Intended to improve system usability, reduce user operating costs, and lower system operating costs by 50%.

My role Group Manager UX & UI Designer

Outcome: Input time for 1 roll

A return visit to Xia Jie, a warehouse worker at U-Play, she XiaJie need to input 2000 rolls raw materials (non-woven fabric) by Balcklake 3.0 system everyday, saved her 2 hours of operation time every day

2'24'

Before

1. Find the task - scan the code into 5 clicks (click 4 times to enter the scanning page, click 1 time to submit after scanning);

2. Complete one input action: 2N clicks (N is the number of codes) (call keyboard (point 1) - enter - collapse keyboard point (point 1)) Keep sliding to find the data input box

1'04"

After

1. Find the task - scan the code into 2 clicks;

2. Complete one input action: N clicks (N is the number of codes) (premise: After the PDA scans the code in, it directly calls the keyboard

02 Making Planning

“Double Diamond Design Model”

-a design process model created by the British Design Council that visualizes how designers can tackle complex challenges by breaking them into four phases: Discover, Define, Develop, and Deliver

Taking Q1 (April-June) of FY 2023 as an example for warehousing _ 17th.Mar.2023

03 Planning of deliverables

UED Group- Planing

	Phase 1: Identify design opportunity points	Phase 2: Output & Implementation	Phase 3: Internal evaluation adjustment & external promotion
To Do	- Develop quantitative standards for user experience - Collect issues (Using 3.0 System、Factory research, telephone follow-up, etc.) - step1 - Use the 3.0 system on your own - Browse JIRA - Conversion issues of Weipeng and Xiaojun - Create a survey questionnaire - Collection of CS experience issues - step2 - Factory research - distribute questionnaires By WJX	- Generate requirements by JIRA - Implement solutions based on JIRA's requirement pool	- Internal - Use-This optimized feature - Rating-(based on quantitative standards of user experience) - External - Delivery - Highlight the optimization points of this presentation (text - publish on various BBS, conference - experience optimization presentation) - Collect feedback (scoring sheet, on-site visit)
Key deliverables	- Issues collection forms - Rolling collection and discussion of questions from team members before on-site visit - Research records of U-play by Wen Zhe, Lei and Moki - CS collection checklist (registration) - Issues collection meeting - Experience Optimization Point Range - The current usage data that needs to be optimized points - Task operation efficiency - Task completion rate - Task completion time - Function utilization rate - Questionnaires	- JIRA - Product PRD (including burial plan) - Design draft - Feature Development - Test	- Optimization point document for this quarter - Promotion Conference - Collect authentic user feedback documents

Related deliverables(Raw planning docs.)

用户体验项目组-分阶段推进方案

第一阶段：明确体验优化点

- 确认用户体验的量化维度 回关于产品用户体验量化与管理
- 收集体验问题（使用系统、工厂调研、电话回访、etc.）
 - step1
 - i. 自己使用3.0系统
 - ii. 浏览JIRA
 - iii. 咨询、微信 转化问题
 - iv. 制作调查问卷
 - v. CS体验问题收集 回智造3.0用户使用体验优化清单表
 - step2
 - i. 工厂调研 回【用户体验项目组】工厂调研
 - ii. 发放问卷：
问卷链接：https://www.wjx.cn/jm/OTFfoHB.aspx#
飞书问卷：「黑湖智造3.0」易用性度量问题

关键交付物

- 体验优化问题-【收集记录】
 - 专项组成员出差前的问题滚动收集与讨论
 - 文档的优派调研记录 回 悠派
 - 问题的优派调研记录 回 悠派项目调研实录
 - 成派的3.0体验记录（含优派）（登记ing） 回 v3.0体验流程归档
 - 原始优派调研记录（登记ing） 回 v3.0组件库归档 回 悠派用户体验
 - C 收集清单（登记ing） 回 智造3.0用户使用体验优化清单表
 - 大会 回 出入库-吐槽大会
- 体验优化点范围-【收集表单】 回 用户体验专项组-优化点记录 (jira)
- 当前量优化点使用数据
 - 任务操作效率
 - 任务完成率
 - 任务完成时间
 - 功能使用率
- 问卷

第二阶段：产出与落地

根据回 用户体验专项组-优化点记录 (jira) 进行方案产出与落地

关键交付物

- jira
- 产品prd（含埋点方案）
- 设计稿
- 功能开发
- 测试

第三阶段：内部测评调整、对外宣发

- 内部
 - 使用-本次优化的功能
 - 评分-（依据用户体验的量化维度）
- 外部
 - 发布
 - 宣讲 本次优化点（文字-发布各BBS、会议-体验优化宣讲）
 - 收集 反馈（打分表、回现场）

关键交付物

- 本季度优化点文档
- 宣发会议
- 收集用户真实反馈的文档

04 Making Standard

Research mainstream measurement standards

Google PULSE

传统的网站衡量指标：

- **P(pageView)**-页面浏览量：属于产品指标，指页面被用户访问的次数，以及页面的点击转化情况。
- **U(uniqueTime)**-访问时间：属于技术指标，指用户网站可以持续稳定运行多长时间。
- **L(latency)**-系统延迟：属于技术指标，指衡量用户打开页面的速度是否流畅。
- **S(Seven-days Active User)**-周用户活跃：属于产品指标，反映真实的实际运营情况，估计产品的用户规模。
- **E(Earning)**-绩效奖金：属于商业指标，指产品的营收情况。不同类型的产品类别是不同的，比如电商类是GMV(商品交易总额)，视频类是广告收入，电子书类是IPV(知识产权)等。

3. 谷歌HEART模型

基于商业和技术的产品生命周期提出的模型图，它包含6个模型，适用于市面上大多数终端产品。

- H(Helpfulness)-愉悦度：用户主观的体验即使用产品或服务时是否会感到愉悦他人。
- E(Engagement)-参与度：用户对产品内容是否感兴趣并愿意主动参与给与他人。
- A(Adoption)-接受度：用户看到新功能或新功能可以接受并且愿意尝试使用的功能。
- R(Retention)-留存度：在一段时间后，新、旧用户是否愿意继续使用产品的功能。
- T(Task-Success)-任务完成度：在使用过程中，用户是否能够高效、准确、流畅地完成当前任务。

[illegible]

Ali-Cloud USE

阿基拉在设计团队将多种技术产品特性, 在多个篇章中评估和改良, 重新思考定制, 设计了 LBS 模型的五个编

易同性 – Ease of Use

易同性是指用户对系统感到轻松的心理。它反映了用户对系统所需掌握的手续和知识、信息等的掌握。易同性包括两个维度，包括易用性的提升和易用性的降低。易用性的提升包括：降低学习成本、提升效率和降低复杂度。

一致性 – Consistency

一致性是指用户对系统所操作的一致程度。分为内部一致性和外部一致性。内部一致性是指系统内部元素的行为、特征、操作等一致。例如用户输入的数据、操作的一致性和数据的一致性。外部一致性是指系统所操作的一致程度。产品属性的同质性、稳定性可以体现一致性。

惊喜度 – Happiness

惊喜度是指用户对产品或服务所获得的惊喜的程度。这个概念一方面包含用户对产品的使用和产生使用行为。

任务成功 = Task Success

任务成功指在**任务完成度**和**任务完成时间**上产品的性能指标与效果。针对有明确任务要求而设定使用流程的产品通过以用户路径与产品设计的匹配程度之测试结果，证明帮助我们在产品流程设计上问题。

性能 = Performance

性能指设计流程的复杂度，其中衡量用户感知到的流程复杂度的指标为“**TASK**”，也称作从最初来到到流程结束内容的长度。其次，还包括**任务完成的时间**，**时间**是设计流程的指标。

阿里巴巴研究中心通过多年设计实践中总结下来的产品使用体验框架系统,它不只是一套方法,更是一套可以传承、迭代和扩充有机体系。

1. 一个包含五大维度的用户体验度量模型。
2. 一个从问题定义到验证的运营管理机制。
3. 一个能够量化测试和数字化的评估工具集。

Abstract standards for BlackLake MES

1. Easy to Use (Task completion rate, Task completion time)
2. Easy to Read (Clear)

- Usability
 - Usability measurement scoring
- Satisfaction
 - NPS rating
- Consistency
 - Product consistency differences
 - Information architecture, framework, page structure

- Task Efficiency
 - Task operation efficiency
 - Task completion rate
 - Task completion time
 - Function utilization rate
 - etc
- Performance
 - Page load time
 - Network request time
 - etc

05 Confirming optimization points

Collect issues

[illegible]

Persona

Name: XiaJie	Age:35	Gender: F	Position: Warehouse clerk
--------------	--------	-----------	---------------------------

Job Description:

Enter the data of 2000 rolls of non-woven fabric (200 pallets, 9-12 rolls per pallet) into the system by scanning code mode.(3 modes: code, non-code, Post-generation code)

Job characteristics:

Large quantity, high accuracy required, using PDA for scanning and entering codes

06 Scanning Mode

The on-site scene is that the hardware devices used by workers is: PDA

However, because the advantages of PDA mode were not considered during system development, workers were uniformly treated as using mobile phone mode (no scanner interface) and were directed to a new QR code scanning page.

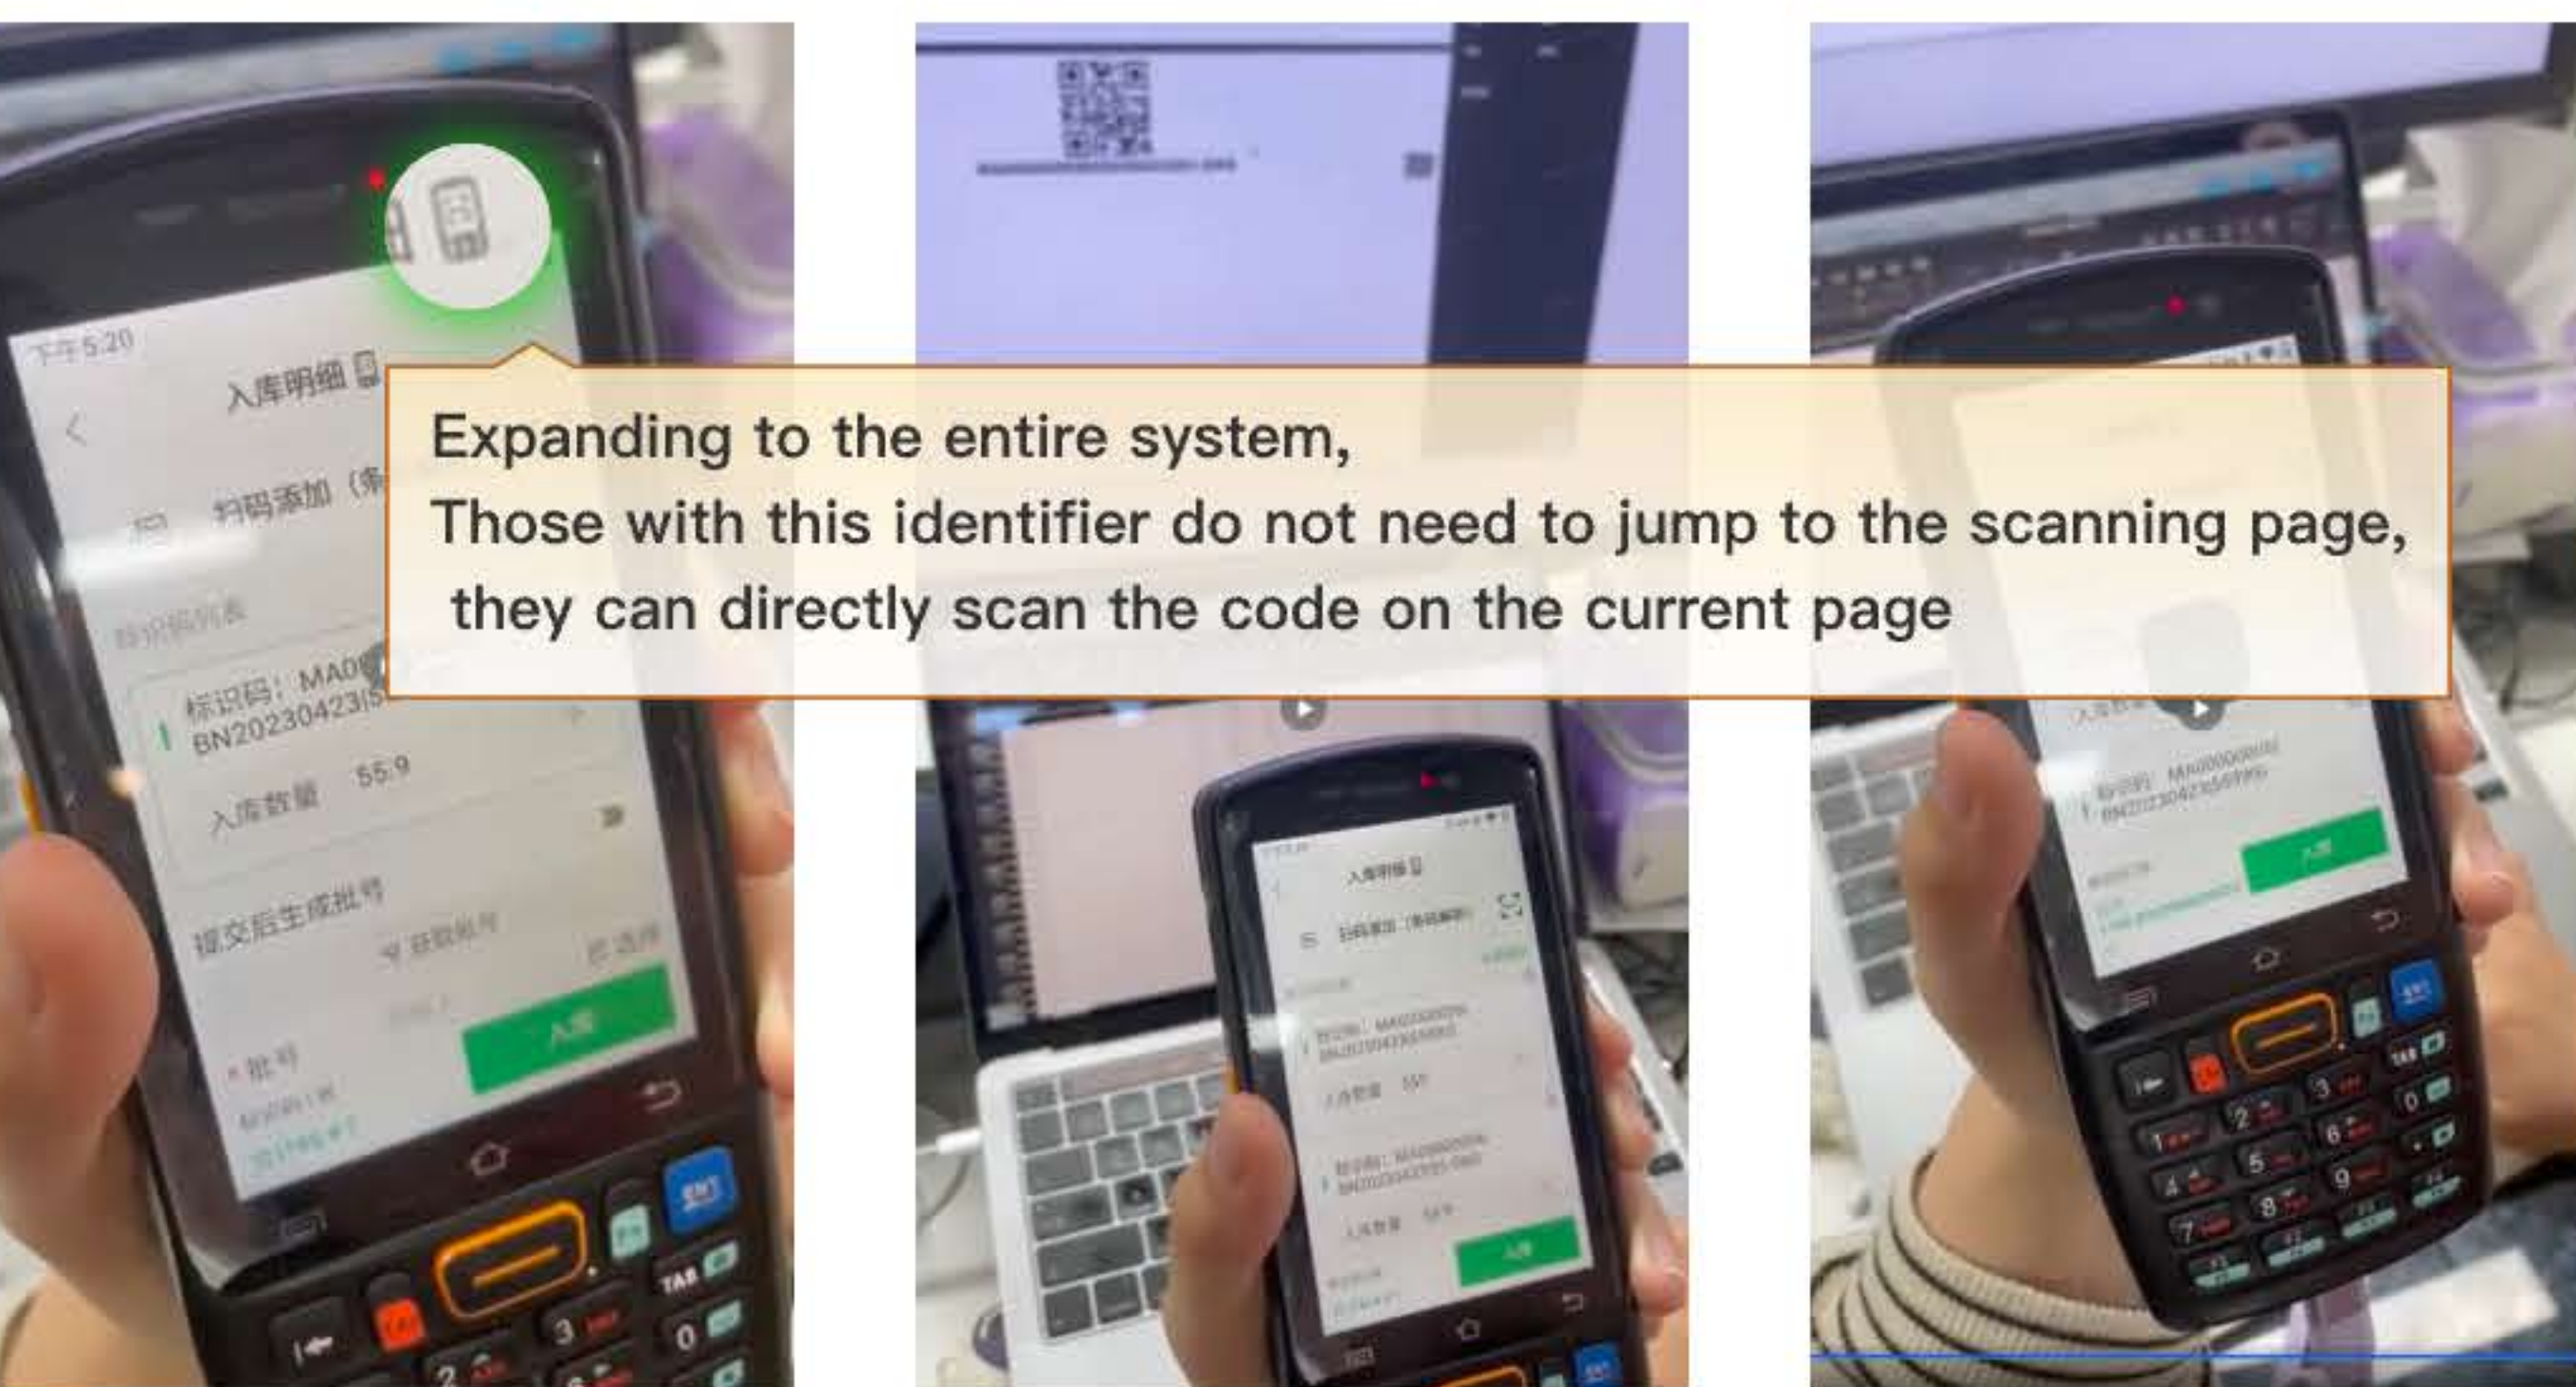

- Step1:
200 pallets everyday, 9-12 rolls per pallet
- Step2:
Enter the scanning page 🖱️ scan the code in sequence
- Step3:
Check to prevent missing scans
Need to repeatedly compare and fill in, with a high error rate.
- Step4:
Fill in the quantity based on the quantity label on each roll
- ⚠️ Causing workers to need to enter a new page when scanning the code, At the same time, the function supports continuous scanning of codes, resulting in the display of 10 blank data to be filled in.

Before User: 2N clicks, 2N jumps (N=number of identification codes)
Click the scan btn → Enter the scan page → Scan the Code → Submit → Jump to the operation page

After User: 0 clicks, 0 jumps (on this Current page)

Scan the first code Scan the 2nd code Scan the 3rd code

Expanding to the entire system, Those with this identifier do not need to jump to the scanning page, they can directly scan the code on the current page

07 Information Layout

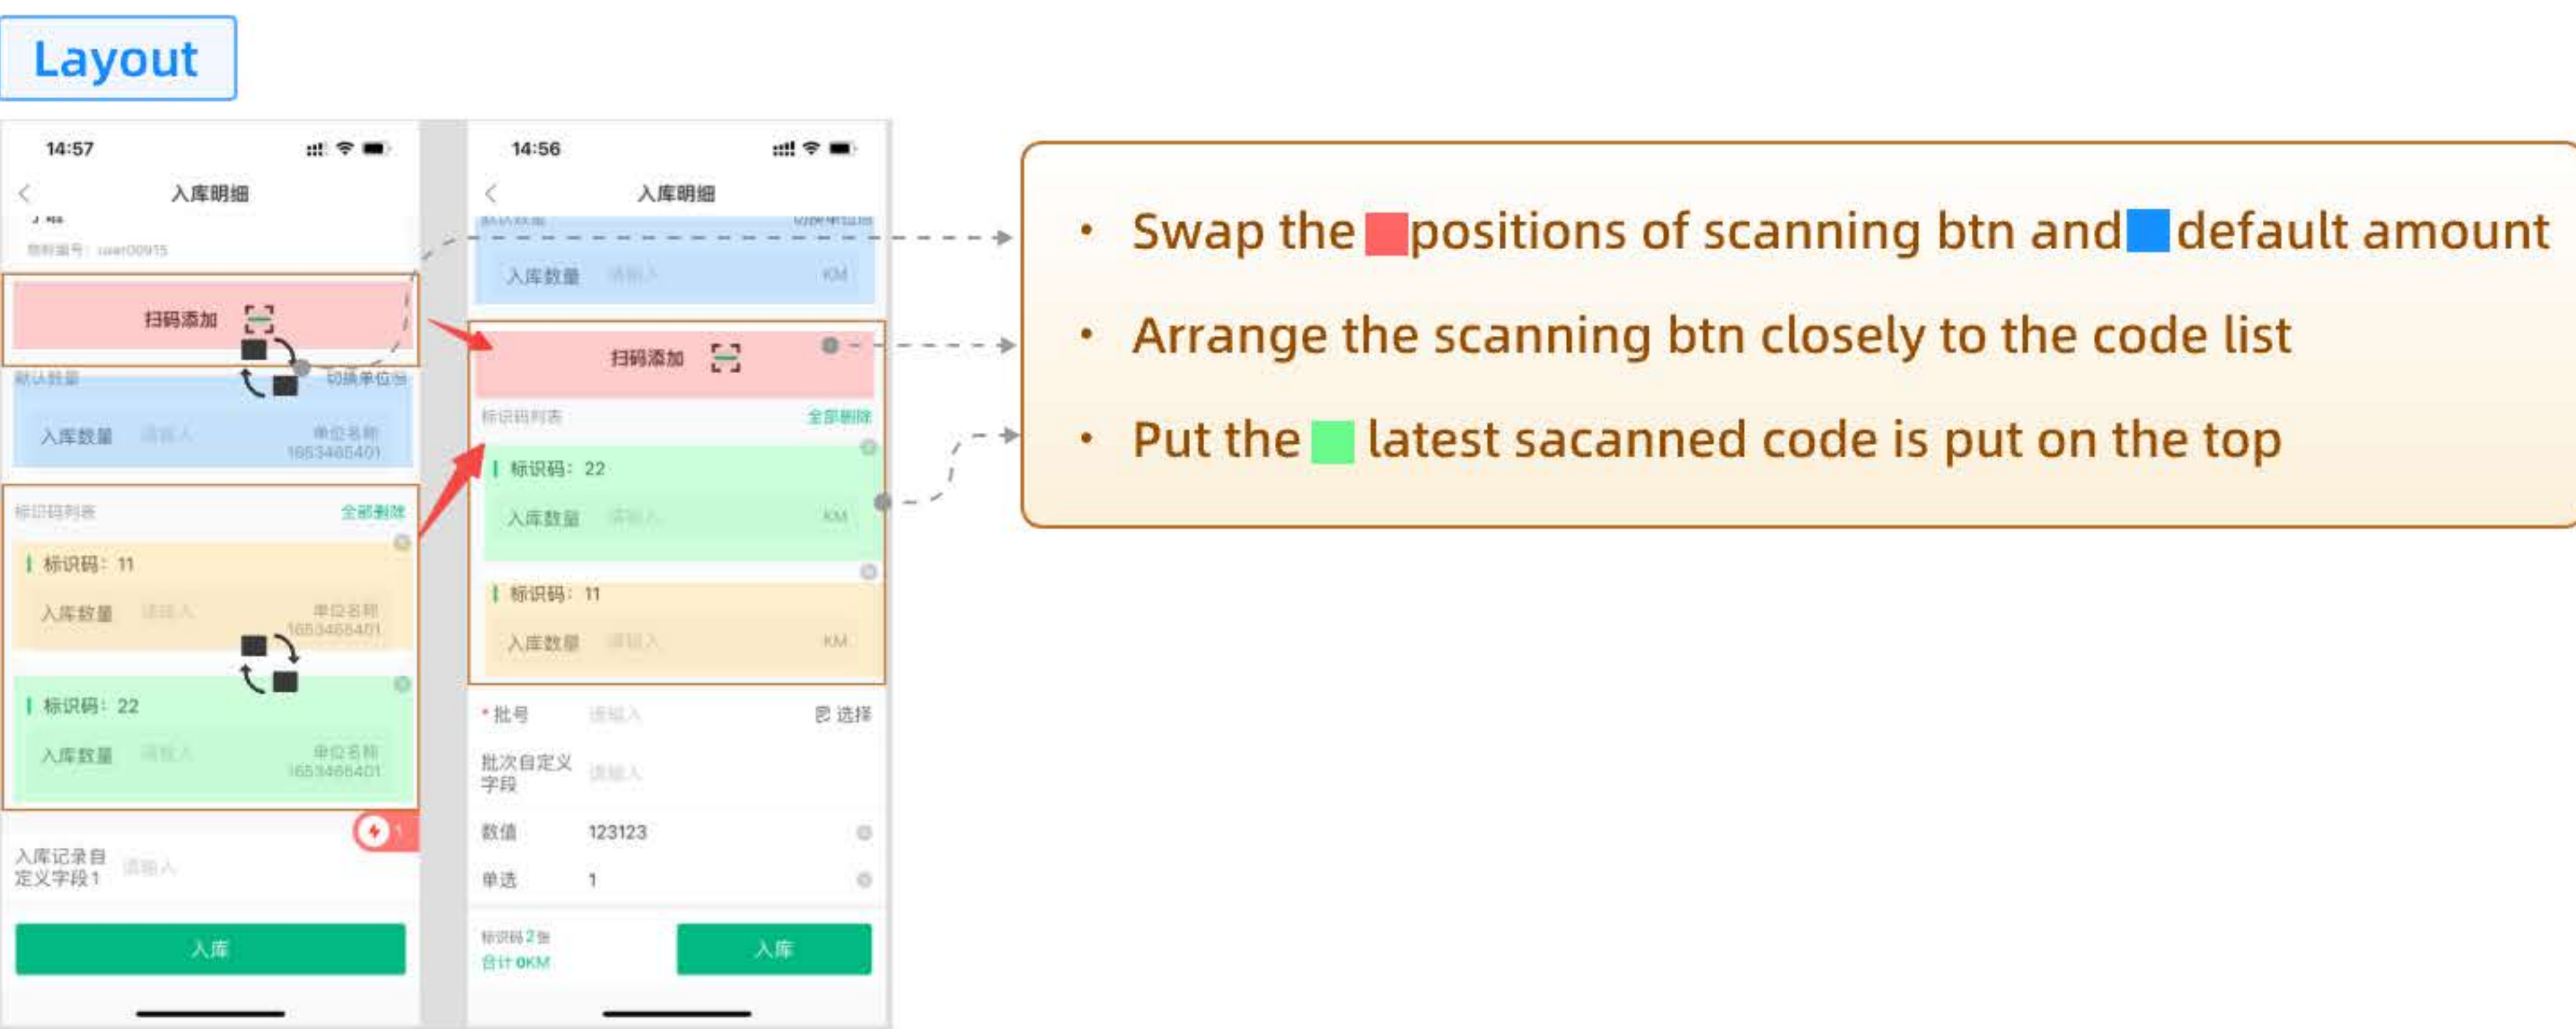

Before

the scanning button is on the top, but the latest scanned code is put on the bottom

Causing users to swipe the page to the bottom to view newly scanned codes, But to trigger the scan code for BTN, you need to scroll back to the top of the page and find BTN.

After: Put the scanning button and the latest scanned code together

- Swap the positions of scanning btn and default amount
- Arrange the scanning btn closely to the code list
- Put the latest scanned code is put on the top

Interactive Links

On-machine effect

08 Total amount

The business scenario is:

Workers cannot verify whether the total weight of non-woven fabric is correct before submission,

Workers know the total quantity only after submission, causing error correction costs and affecting efficiency.

Before

After

On-machine effect

09 Multimodal feedback

When the hardware devices used by workers is: Mobil Phone

Pain Point

When scanning with a mobile phone, there's no built-in feedback from the PDA hardware: beeps and vibrations.

This means workers can't tell whether the code has been successfully recognized.

Solution

Add corresponding physical feedback: Sound, Vibration

- Search open-source audio sources → download materials → test clarity
- Add global configuration on the app to configure the scanning feedback for this hardware device.

10 Optimize components

Before

(Clarity and recognition issues)

The touch target size is insufficient. The comparison between the selected and unselected states is not significant, resulting in low recognition.

After

Transform the linearity of the 'lower level' btn into planarity, enhance the click sensation, and expand the touch target. And develop touch target specifications as design guidelines.

Develop the page layout

Design interactive drafts and corresponding design guidelines

11 Challenge

Q1: How can I iterate daily requirements and this project in parallel with limited resources (human and time)?

A: Define issues' types and priorities based on the number of participating roles

Priorities	PM	Designer	Front-end
S1-i	●	●	●
S1-i	●	●	●
S1-ii	●	●	●

1. **S1-Phase 1:**
 - a. Task operation efficiency、Usability
 - b. Task operation efficiency、Usability (The functional and business level solutions need to be improved)

*PMs prioritize individual needs based on their priority

Using iteration as the dimension, in batches (in the most recent iteration, positioned in the review plan)

2. **S2-Phase 2:**
 - a. Overall page layout and UI upgrade

Q2: How to **effectively** discover **real and specific** problems?

Field research Replace Operation

A: Assist team members in efficiently anchoring operational issues:
Replace Operation > Interview in the meeting room

	03/27		03/28		03/29	03/30	03/31
	D1-AM	D1-PM	D2		D3	D4	D5
☀️Day	🕒Departure-9AM ShangHai HongQiao Station 🕒Arrival-11AM WuHu Station	Walk through the entire factory Production, warehousing, and quality inspection E-commerce warehouse. etc	Replace Operation 1. Confirm the execution position; 2. Execute job tasks (follow 1 worker for every 2 people)		Replace Operation 1. Confirm the execution position; 2. Execute job tasks (follow 1 worker for every 2 people)		
		Workers' off work hours 5:30PM	Interview with clients Mr. Qian (in charge of warehouse) Other responsible persons				
🌃Night		Collapse problem	Collapse problem		Collapse problem	Collapse problem	Collapse problem

Pre-trip Alignment

- a. U-Play has multiple factories in Wuhu City, Which one should we visit? Will we be visiting multiple factories?
- b. What is the factory's work schedule? What are the morning and afternoon entry times?
- c. What is the order of the tour? Do we need to tour the entire factory again the next day?
- d. Are there any taboos during the factory visit (places not to visit, questions not to ask)?
- e. Provide/coordinate interview personnel (needs the corresponding person in charge/manager for production and warehousing (raw materials, line work, finished goods)...)
- f. During the focused factory visit on D2, will everyone go to the same warehouse together, or will we be divided into groups?
- g. Replace operations on D3-D5.

12 Review and reflection

As mentioned at the beginning, the UED Project was established in response to the 930 Campaign. But why was it given the P0 (highest priority)? I tried to review the situation and find an answer.

Seize opportunities

When I first joined Black Lake, I discovered that the entire product and R&D team was technology-oriented and didn't prioritize the importance of experience design. This led to numerous issues during the rapid launch of the product, along with feedback from the customer support team (CS), and during personal use.

Thanks to my then-teammate **Lei(TeamLeader of front-end engineer)**, our ideas clicked. After our **initial collaboration on the 2022 HD project**, we developed a mutual trust.

After several rounds of discussions, the GM of the Black Lake Intelligent Manufacturing business line realized that experience issues were a pressing issue that needed to be addressed.

Thinking and collaboration

Professional beliefs as a designer

Asset accumulation

Workers have higher requirements for touch target and color distinguishability. I have also established: 1. Touch Target Guidelines; 2. System primary color proofreading (as design references for designers and front-end engineers).

1. Touch Target Guidlins

2. Recalibrated the system's primary color

Using research tools

We don't need to pursue comprehensive methods, instead, we should know how to prescribe the right remedy for the problem. Less is more.

eg: User Journey Map

I Shared the UJM's usage experience at the weekly meeting
